Over 20 years ago, three craftsmen founded Cabico in a garage in rural Quebec. They shared a small collection of tools, a strong work ethic, and a love of fine woodworking. Since then, the company has grown to become an employer of 400 hard-working professionals with three manufacturing facilities. Today, the Cabico team takes great pride in producing one of the most extensive offerings of fine framed and frameless custom cabinetry available in North America. Despite remarkable growth, one thing hasn’t changed a bit: Cabico’s commitment to impeccable craftsmanship. We still take an artisan approach to every order, so our cabinetmakers can devote themselves completely – hands, heart, and soul – to producing and perfecting each unique project. Central to the success of our approach is the foundation that unites all Cabico employees: A passion for beautiful woods, impeccable quality, and the intrinsic rewards of a job well done.
For more than 20 years, Cabico has been one of North America’s leading manufacturers of custom cabinetry for kitchens, bathrooms, or any other room in the home.

Our recognized experience and design flexibility make it possible for us to tackle even the most complex and innovative projects in an expedient manner. With Cabico, you get exceptional quality and the flexibility to create your own one-of-a-kind design that perfectly fits you - your space, your style, your life.

For us, this philosophy has been our trademark from the beginning. Cabico has developed an exceptionally flexible and efficient one-off production method that lets our artisans concentrate on one project at a time. Therefore, we can achieve a high production volume without diminishing the craftsmanship that goes into each project—whatever the style, size, or finish.

For you, dealers and designers, our unique project philosophy means unlimited design flexibility. As every customer is unique, your creations will be, too. Cabico stands ready to realize your design. And on top of the virtually endless possibilities, Cabico offers you practical and effective design tools.

For you, the consumer, we are keenly aware that the project we create will be an important part of your daily life. While the design and style are of your choosing we take full responsibility for quality and durability. That’s where our know-how, thoroughness, consistency, and quality materials, finishes, and components ensure that you get the best for years to come. Together with your designer, we’ll bring your dream project—reflecting your unique personality and lifestyle—home to stay.
Styles

Many cabinets styles for unlimited design possibilities...

Cabinet construction

Construction types available:
Faceframe full (1 ¼") & traditional (1/2") overlay, Inset (flush or beaded) and frameless

1. Cabinet construction: 5/8” sides and fixed shelves available in particle board and plywood with ¼” backs

2. Drawer fronts attached to 5/8” hardwood dovetailed boxes on full extension undermounted glides with soft close

3. 6 way adjustable self closing door hinges with optional soft close

4. Cabinet interiors are produced with easy to clean white or simulated maple melamine (on particle board boxes) or birch veneer (on plywood boxes)

5. A variety of ¾” solid wood, painted MDF or thermofoil door styles

6. ¾” adjustable shelves

7. 5/8” hardwood dovetailed roll-out boxes on full extension ball bearing glides

8. Exposed cabinet sides will be flush finished matching veneer

9. All cabinets come with a limited lifetime warranty
Cabico’s artisan cabinet-makers know wood and its nature as only a professional can. Cabico has a standard offering of 16 wood species, one of the most flexible and versatile offerings in the industry.

**Cherry**

Hardwood with variations of colors, mineral streaks, fine pin holes and pitch pockets. The variations are more apparent in natural or light stains.

**Red Birch**

A medium dense hardwood with fine, uniform grain.

**Rustic Cherry**

Regular cherry with knots, light and dark spots, worm holes and splits left in the wood that gives it a rustic look.

**Red Oak**

The strongest hardwood of our line. The distinct and unique grain pattern varies from straight, to a gradual arch, to sharp and pointed.

**Hickory**

Heavy and strong hardwood. Random specks, mineral streaks and knots are common. Knots are stabilized in production.

**Maple**

A heavy, strong hardwood resistant to shock with closed, uniform grain. This light colored wood may darken slightly over time.

**Rustic Alder**

Very soft hardwood with fine grain that has knots, light and dark spots, worm holes and splits throughout each piece that give it the rustic look.

**Knotty Pine**

Soft wood with the rustic look of an open straight grain that may include visible knots, wormholes, splits and light and dark spots.
Quarter Sawn Red Oak

Known for its distinctive “ray fleck” in the wood grain. It gets its unique look from the way the wood is sawn, which results in a surface with an elegant, straight grained appearance that sets it apart from the more common “cathedral grain”. Available in solid wood items only.

Quarter Sawn Maple

A heavy, closed grain creamish to white hard-wood. The quarter sawing gives it a straight, parallel grain. Only available in frameless construction using door style #130, #140 or #150. It is only available in Vertical grain in the Natural color.

Quarter Sawn Cherry

Fine textured wood, with parallel narrower wood grain and redish brown color with a golden luster. Only available in frameless construction using door style #130, #140 or #150. It is only available in Vertical grain in the Natural color.

Black Walnut

Known for its beautiful grain character and its creamy white color of sapwood and a rich chocolate brown heartwood. Relatively light-weight hardwood. It is only available in frameless construction using door #130, #140 or #150. It is only available in Vertical grain in the Natural color.

Caramelized Bamboo

Appreciated for its clean airy look and as a sustainable, environmentally friendly material. Bamboo is a hardwood that has a light caramel tone due to a special heating process. It is only available in frameless construction using door style #130, #140 or #150 and Natural color.

Anigre

Appreciated for its definitive wood pattern. Anigre is a hardwood with color variations ranging from yellow-white to pale brown, sometimes with a red gray hue. It is only available in frameless construction using door style #130, #140 or #150 and African color.

Rift Cut Oak

Regular Oak that has been cut in a special manner to create a straight grain. Color will vary from a pinkish hue to a light brown. Rift cut oak is available in veneer only.

Darkened Birch

Regular Birch which has a unique grain texture and natural dark color due to a special drying process.

With a wide variety of wood species, Cabico lets you express yourself to the fullest without impeding your creativity. Cabico’s wood species offering reflects the style and taste of our customers from coast to coast.

With a wide variety of wood species, Cabico lets you express yourself to the fullest without impeding your creativity. Cabico’s wood species offering reflects the style and taste of our customers from coast to coast.
Cabico offers a multitude of finishes and colors to fit your unique expression.

Note: The color of door styles shown in this guide are as accurate as photographs and printing permit. Cabico strongly recommends the use of actual samples to make your final selection.

Most of Cabico’s standard colors are available with 10%, 35%, 60% or 90%* sheen (*90% sheen is not available on all door styles)
Finishing Techniques

**Glaze**

Used to enhance the contrast. This special finish is created when highlights are hand applied to the contours and profiles, after the sanding sealer has dried.

- **Black glaze on Mahogany**
- **Rustic Cherry**

**Antique Glaze**

The finish is a hand applied technique of accentuating the finish by covering the stain with a glaze. The result is a finish with varying degrees of glazing that remains in the edges, assembly joints, end grains and natural imperfections, thus accentuating the details. The antique glaze will slightly alter the color.

- **Antique Brown glaze on Autumn Maple**

**Rub-Through**

A technique of creating an old world furniture look on new cabinetry. The second finish coat is wiped off to expose the wood underneath, resulting in a worn appearance.

- **Special color OPBT-6693 on Maple**

**Distressing**

A technique of creating an illusion of antique cabinetry on new wood. The corners and edges of doors are sanded down then dents, worm holes and thin crack lines are added along the grain.

- **Brown glaze on Royal Maple**

**Worn Corners**

A technique similar to distressing with the exception of dents, worm holes and thin cracks along the grain (only the edges and the corners are sanded down).

- **Special color OPBT-6636 on Maple**
  Shown on the cover page as ND-770/3/H.

**Glaze**

- **White**
- **Cream**
- **Brown**
- **Black**
- **Coffee**
- **Pewter**
- **Caramel**
